**Subject:** RE: ST012 weekly report thru July 8, 2016

This table was a little difficult to understand at first. Amec said no more LNAPL can be recovered by pressure cycling – but since they turned the system off, they have pumped ~ 800 gallons of LNAPL from these wells that no longer produce LNAPL. Amec has been saying that once they pumped the LNAPL out of the wells, it has not been returning. That may be true for some wells, but LSZ12 and LSZ14 both show considerable LNAPL returning after they were first pumped down. LSZ37 appears to be another one where considerable LNAPL returned. And many – most – of the wells have not been re-checked after LNAPL was recovered, so they really don't know if LNAPL is returning or not.

Carolyn, Don has left me off the distribution list for these weekly reports. Wayne forwarded some to me late last week, so I have up to the July 8 report – could you please forward any reports received since then? Maybe you could also get Don to add me back on the distribution list.

Thanks Eva

I'm back from vacation today –

Particularly see table beginning on page 11 – on presence of LNAPL remaining in SEE wells

Carolyn
